Drive-Thru COVID-19 Vaccine Blitz Event
Booster Eligibility Below

Saturday, November 6, 2021

8:00 AM - 12:00 PM DST

- 12 years & older: Pfizer Vaccine - 1st, 2nd dose
- 18 years & older: Pfizer Vaccine - booster dose
- 18 years & older: Moderna Vaccine - 1st, 2nd, booster dose

Booster Doses

The following people **SHOULD** get a booster dose of the Pfizer or Moderna vaccine 6 months or more after their 2nd dose:

- 65 or older
- 50-64 with underlying health conditions, including overweight, diabetes and high blood pressure

Additionally, the following people **MAY** get a booster dose of the **Pfizer or Moderna** vaccine 6 months or more after their 2nd dose

- 18-49 and have underlying health conditions, including overweight, diabetes and high blood pressure
- 18-64 and have a job that may increase the risk of exposure to COVID-19

Please bring your vaccination card with you. We will need to verify your previous doses and update your vaccination card. If you have misplaced your card, please let us know upon arrival.

Proof of underlying conditions or job exposure risk is **NOT** required.

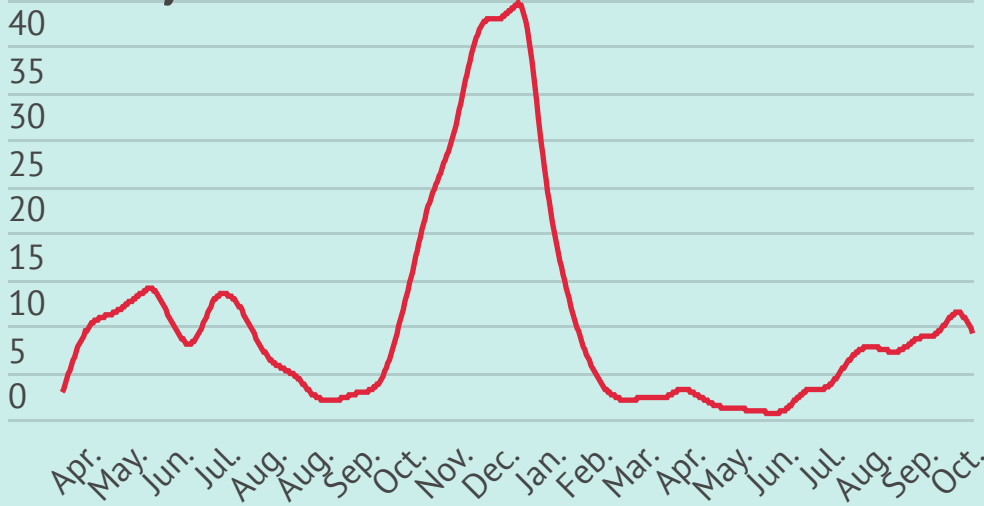

Those that received **Johnson & Johnson** at least 2 months ago should get a booster dose of any of the 3 vaccines of their choice. **Yes, patients can choose to get a booster dose of a different brand from their original series.**

Pandemic Status

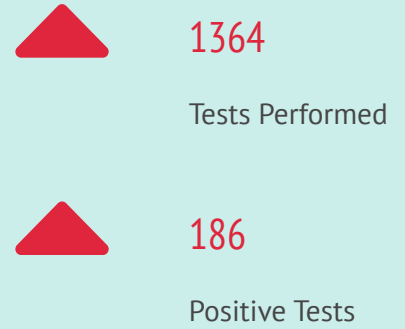

The risk of disease and the severity of the COVID-19 pandemic in our community is defined by the Navajo Nation and TCRHCC according to the five color coded risk levels below.

Risk Level Community Spread Disease Risk	Level Purple: Severe Outbreak Critical	Level Red: Extensive Very High	Level Orange: Substantial High	Level Yellow: Moderate Moderate	Level Green: Zero to Minimal Low
--	--	--------------------------------------	--------------------------------------	---------------------------------------	--

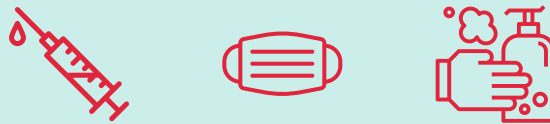

Daily New Cases

Tests in Past Two Weeks

Tuba City Service Area is currently at **Risk Level Red**. In other words, considering current case numbers, percentage of positives in people getting tested, and public health and hospital capacity, our communities are at critical risk of disease.

In the last 3 weeks, Tuba City Service Area has seen the highest number of COVID-19 cases since January. Most of these cases are in unvaccinated people and are related to social gathering. New data after the Delta variant shows that unvaccinated people are 5 times more likely to get infected, more than 10 times more likely to be hospitalized, and more than 10 times more likely to die from COVID-19.

Even though it is less likely, vaccinated people can still catch the virus and can spread it to others.

- Wear a mask
- Stay 6 feet from others
- Avoid social gathering, especially with unvaccinated people
- Limit unnecessary travel and avoid indoor dining
- Get tested if any symptoms or any possible exposures
- Wash your hands.

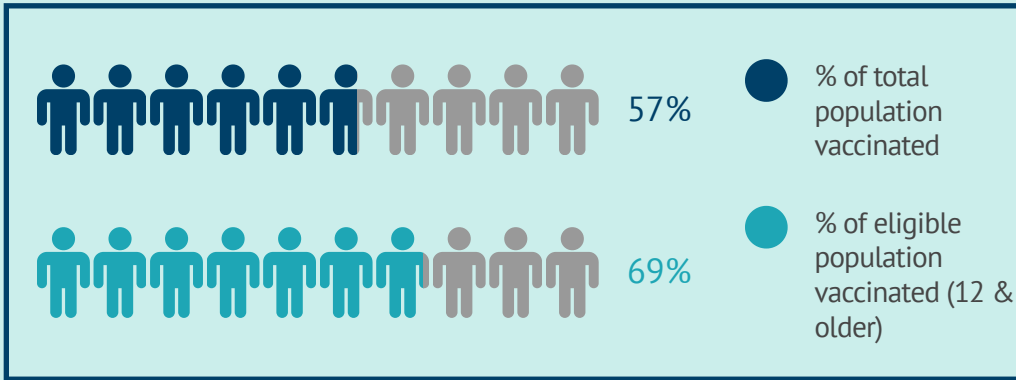

385 million doses of Pfizer and Moderna have been given in the US so far. More than 32,000 have been given right here in our Service Area. **Getting fully vaccinated today is the safest choice.**

TCRHCC is proud to say that by November 9th, all TCRHCC employees, contractors, or volunteers will be fully vaccinated unless they have a medical exemption.

Vaccination Update

Of those 12 and older who live in the following chapters/communities Tuba City, Coalmine, Cameron, Dinnebito, Lechee, Bodaway-Gap, Coppermine, Kaibeto, Tonalea, and Moencopi Villages and have been seen at least once at any TCRHCC location in the last three years, 65% have received at least one dose and 62% are fully vaccinated. For those 65 and older 83% have had at least 1 dose and 82% are fully vaccinated. If you or your 12 and older child is not yet fully vaccinated, TCRHCC highly encourages vaccination now. Stay tuned, we anticipate the vaccine being approved for 5-11 year olds later this fall! In the Tuba City Service Area, there are currently 12,606 people who are fully vaccinated, and 13,354 people with at least 1 dose of the vaccine.
